

Te Waipounamu and the waka

The four moth regions of Te Waipounamu are represented by parts of the Waka. Colour them to match their moths and label them.

Te Taurapa region is named for the stern of the waka, and includes Rakiura the anchor. **Te Hiheru** region is named for the bailer that is usually depicted as sitting on the center of the stern end of the waka. Appropriate for these dry dusty basins. We named the East Coast and West Coast of the South Island as a pair both alluding to different sections of the hull. **Te Rauawa** region is named for the gunwales of the waka. The gunwales are the top edge of planking, and are wet from sea spray most of the time. As the West Coast is wetter, it became Te Rauawa. **Te Tahiwī** region is named for the hull of the waka. The East Coast being the drier became Te Tahiwī.
